Maintenance solutions
ontrack plant, wagons & equipment

A structured approach to maintenance solutions

Ontrack Plant, wagons and equipment

All around the world, cranes and materials handling equipment manufactured and supplied by the Clarke Chapman group of companies are in daily operation:-

- *Cowans Sheldon in railways*
- *RB Cranes on construction sites and ports*
- *Stohtert and Pitt in ports, military establishments and offshore installations*
- *Wellman Booth in steel plants, nuclear installations, waste management and military*

Wherever they are in action, these pieces of machinery are a vital link in the never-ending movement of raw materials and goods generated by today's global economy. Supporting them, and other manufacturers' equipment, is Clarke Chapman Services which has a wealth and breadth of experience in the installation, repair, refurbishment and relocation of a major plant. Equally Clarke Chapman Facilities Management (CCFM) provides a bespoke facilities management service, helping clients to concentrate on their core business.

Keeping the rail network on the move relies on regular infrastructure maintenance and renewals. CCFM supports this ideology by providing 24-7-52 mobile maintenance for on-track plant, wagons and equipment. Our experience in asset and facilities management is extensive bringing together expertise from different engineering sectors.

- Operate in public and private sectors.
- Operate vehicle maintenance plans providing balanced maintenance for an efficient cost effective solution.
- Supported by sister companies in The Clarke Chapman Group Ltd, CCFM have a multidiscipline workforce, resources, skills and experience to provide maintenance and engineering solutions to clients to maintain and increase efficiency to their valued asset.
- Innovation is the key to a successful future.
- Spares stock and retrieval control.
- CCFM work with clients to optimise and meet their business objectives.
- CCFM's strength is based on the long association in facilities and asset management with clients dating back to the start of our business in the 1970's when they saw the benefits of outsourcing.

years of experience

Buildings, Structures & Systems

Maintaining buildings and structures is paramount to ensure the longevity of a valued asset.

CCFM maintenance programs provide the skills, resource and experience gained from many years of providing customers with a fully integrated mechanical, electrical engineering and contracting service. Our maintenance services are tailored to clients existing culture and working practices and where necessary, introduce improvements from our experiences in other industries, in both public and the private sectors.

Our service is both planned and reactive either by resident or mobile service technicians.

Our objective is to ensure client security, comfort, minimise disruption, and provide an efficient environment which reflects on the image of that client.

Mechanical services include:

- Heating and ventilation
- Lifts
- Handling systems
- Air conditioning
- Compressed air
- Drainage
- Gas Installations
- Water systems

Electrical services include:

- Lighting
- High & Low voltage systems
- Uninterruptible power supplies
- Security and entry systems
- Wiring and distribution
- Display management
- PAT Testing

Buildings & Structures include:

- Repair / refurbish
- Fabrication
- Installation

- Building works
- Ground works
- Drainage

In all aspects of railway related works, safety is paramount; we operate a full competency training and accreditation programme for our workforce which is monitored through our quality system on a regular basis.

strategically situated – nationwide

Safety

Clarke Chapman provide a full electrical safety package which includes testing and inspecting all fixed wiring installations, portable appliances, emergency lighting and fire alarms. We will ensure that you comply with the 1989 Electricity at

Work regulations and meet the required safety standards quickly and with minimal disruption.

Our fully qualified and experienced engineers test each appliance, using dedicated test equipment (PAT).

For several years, a dedicated team

of engineers has looked after approximately 150,000 electrical items on sites throughout the UK.

Our standard system is capable of satisfying individual requirements.
